BA TECHNOLOGY, DATA, & INSIGHT

November 2026

RESULTS

Evaluation

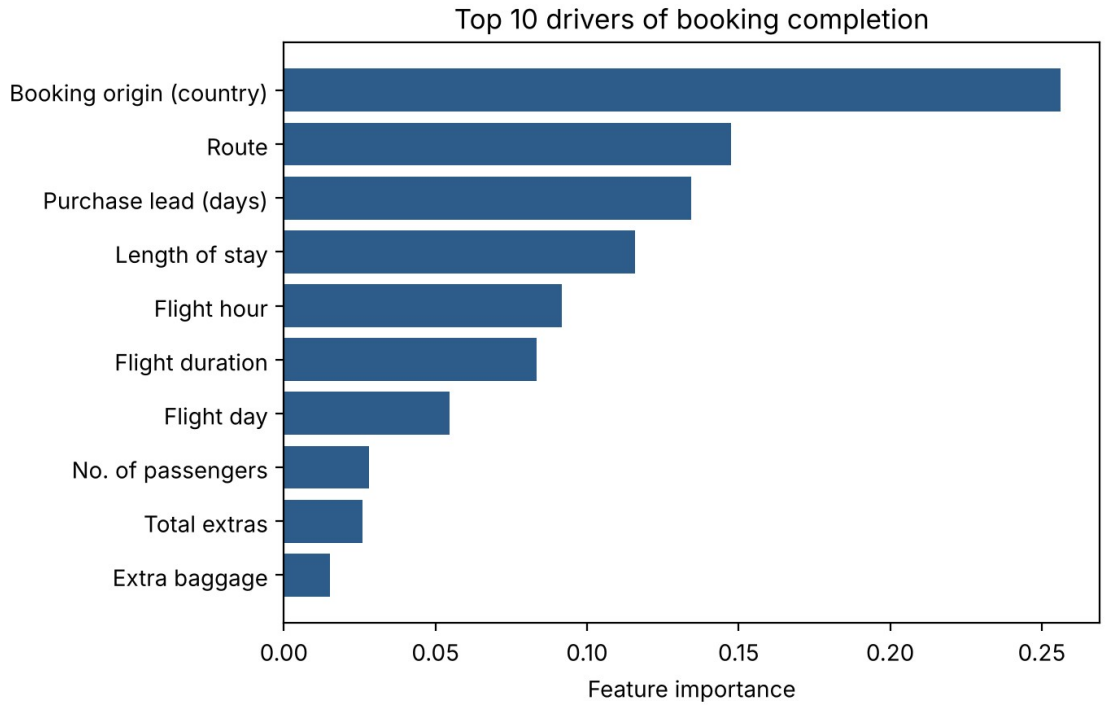

- Booking origin (customer's country) is the strongest predictor, with 26% of total importance.

- Route (15%), purchase lead time (13%), length of stay (12%) and flight hour (9%) also matter. Extras (baggage, seat, meals), sales channel and trip type have little influence.

- Random Forest, 5-fold cross-validation, 50,000 bookings: accuracy 76%, ROC-AUC 0.78, recall 60%, precision 34% (only 15% of enquiries end in a booking).

- The model catches 6 in 10 real bookers, so BA can target offers by country, route and timing. Next step: add more customer data and test other models to improve precision.
